

Your email, calendar and contacts delivered to your mobile anytime and anywhere in the world with network coverage. That's the promise of Lifecycle's Office-over-Mobile solution.

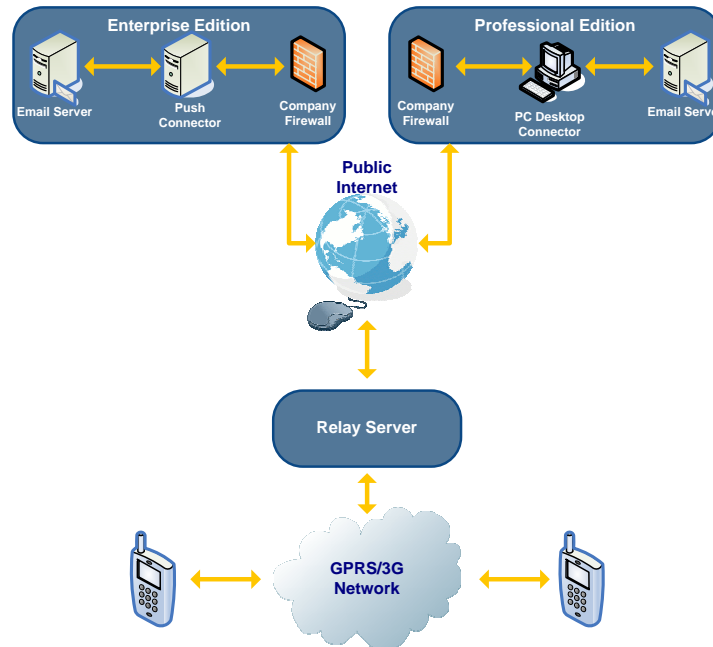

No need to miss that important deal clinching email or miss a customer appointment because someone changed your calendar while you were travelling.

Data is securely transmitted over the internet using AES encryption to prevent eavesdroppers intercepting your confidential data. Office-over-Mobile also sits behind your firewall for additional protection.

Lifecycle's Office-over-Mobile solution is powered by SEVEN, the world's leading provider of push email solutions. Unlike other such solutions, a wide range of mobile devices are supported including Mobile Phones (J2ME or BREW), SmartPhones (Palm, Microsoft Pocket PC, Microsoft Smartphone 2003, Microsoft Windows Mobile 5.0 or Symbian OS) and PDAs (Palm or Pocket PC). New devices are continually being added so please check <http://www.seven.com/products/devices/index.html> to find your device.

Lifecycle distributes two versions of the product for use with Microsoft Exchange and Lotus Domino Email Servers:

- **Always-On Mail Professional Edition** – ideal for organisations with between one and 25 push email subscribers. This edition is installed on a company PC running Microsoft Outlook 2003 and is suitable for end user installation.
- **Always-On Mail Enterprise Edition** – suitable for organisations of more than 25 employees who have Microsoft Exchange or Lotus Domino Email servers. It requires installation on a system on the same LAN as the Email Server and can be managed installed by your IT group.

Both editions are easy to install and use, but Lifecycle is pleased to offer an on-site or remote installation service should you need it.

Lifecycle can supply, through its partners, the Office-over-Mobile solution pre-installed on pay as you go or contract mobile phones.

Please contact Lifecycle for a free 30 day trial and to answer any questions that you may have.
