Bill better, grow faster

Powerful and versatile billing platform to handle the complex billing needs of agile telecoms. Set up for success with flexible features to manage, rate and bill subscribers and any kind of business partner.

AIO Billing is a flexible Convergent Billing System. Provides mediation of usage for any service and network, multi-play subscription management with event based and batch rating, discounting, and invoicing, including support for account hierarchy, resellers commissioning, large fleet, roaming and wholesales billing - all in one.

This removes the complexity of managing several platforms, with more flexibility and ease of change, and reduces operational costs.

Multi-Tenanted by design, it is a core BSS component for modern Service Providers to manage retail, corporate and wholesales with one platform, as well as for Telcos to empower and reduce costs of operation for MVNEs and MVNOs.

Cloud-native architecture based on micro-services and Kubernetes, with Open APIs, for maximum efficiency and inter operability

ALLinONE Billing, one single system for multiple needs

Billing

- Retail
- SMB
- Fleet

Bearer

- PSTN
- 2G, 3G, 4G, 5G
- xDSL
- FTTH

Service

- Voice
- Data
- Messaging
- Streaming
- Storage
- VPN

Key Features

Name	Description
Multi-Tenancy	AIO is a multi-tenanted platform, which empowers operators to handle the billing needs of their MVNE, MVNOs, opcos and sub brands.
Data Integration	AIO can integrate with a wide range of data sources, including CRM systems, ERP systems, and billing systems. This allows for a single view of customer data, which can improve the accuracy and efficiency of billing processes.
Rating and billing	AIO can support a wide range of rating and billing models, including postpaid, prepaid, and hybrid billing. This allows organizations to offer a variety of billing options to their customers.
Reporting and analytics	AIO provides a comprehensive set of reporting and analytics tools that can help organizations to track their billing performance and identify areas for improvement.
Outstanding accuracy	High degree of automation with integration with provisioning and payment functions for maximum accuracy.
Supports the configuration of workflow triggers	These triggers can be used to control services, trigger alarms or notifications. For example usage consumption trigger: 80% and 100% of allowance could be used to drive an automatic notification at 80% and an automatic notification and suspension at 100% if required.

Key Features

Seamless payment processing

with a wide range of payment gateways and financial institutions

Automated dunning and debt collection process

generate notices and reminders for customers with overdue bills, generate info for third-party Debt Collectors, pause and resume subscriptions and services accordingly

Interconnect Billing and Reconciliation

anticipate interconnection and roaming costs , streamlining the subsequent reconciliation process

Custom Bill Cycles per account

with options for daily, weekly, fortnightly, monthly, bi-monthly, and quarterly, either on fixed dates or on calendar periods. You can also manually configure and request any bill run to be operated On-demand

Grow your Ecosystem

Flexible Commission and revenue share structures for sales agents, resellers, and partners

Secure & Resilient

Equipped with the latest security measures and protocols, ensuring a secure environment for all operations. AllinOne Billing is a dependable and highly resilient solution.

Account Credit Management

enable accounts to remain within a pre-defined credit limit. Multi-level resellers can protect themselves and their client base through the application of ACM to resellers and sub resellers

OCS & CCS – real time charging

Includes the Policy Control Function and mechanisms to control usage of services, and to authenticate and validate the request or block if unauthorized. Service Limits/Caps, Service Bars and Fair Usage Policies can be defined. The Rating & Charging functions (RF & CF) are capable of handling offline and online charging with flexible rating rules and structures

Excel in customer experience

Usage Billing

- Multiple measurement units: seconds, kb, event and event types.
- Multiple usage feeds: retail and wholesale CDR, switch-data, interconnect.
- Multiple mechanisms for charging usage including minimum and maximum charge, duration, increments, connection fees, split rates.

Bundles & Discounts

- Flexibly configure allowance bundles, regional tiered ratings and duration periods.
- Allowances can be pro-rated, reducing the allowance based on days active from activation date to invoice date.
- Provide discounts, rewards, payback and innovative loyalty schemes.

Invoice Generation

- Generate invoices in various languages in any currency using multiple templates.
- Templates can incorporate distinct logos and company information for white-label billing such as OpCos, MVNOs and sub-brands.
- Send PDF invoices automatically via email and make them available in the self-care app.
- Consolidate charges from multiple services and products.

Why Lifecycle?

Automate and win with unprecedented levels of efficiency

Master the digital experience with total customer centricity

Lead the market with the ultimate tech stack
